Avg_Offers_Received_Per_Day, Avg_Offers_Viewed_Per_Day and Avg_Offers_Completed_Per_Day by date (bins)

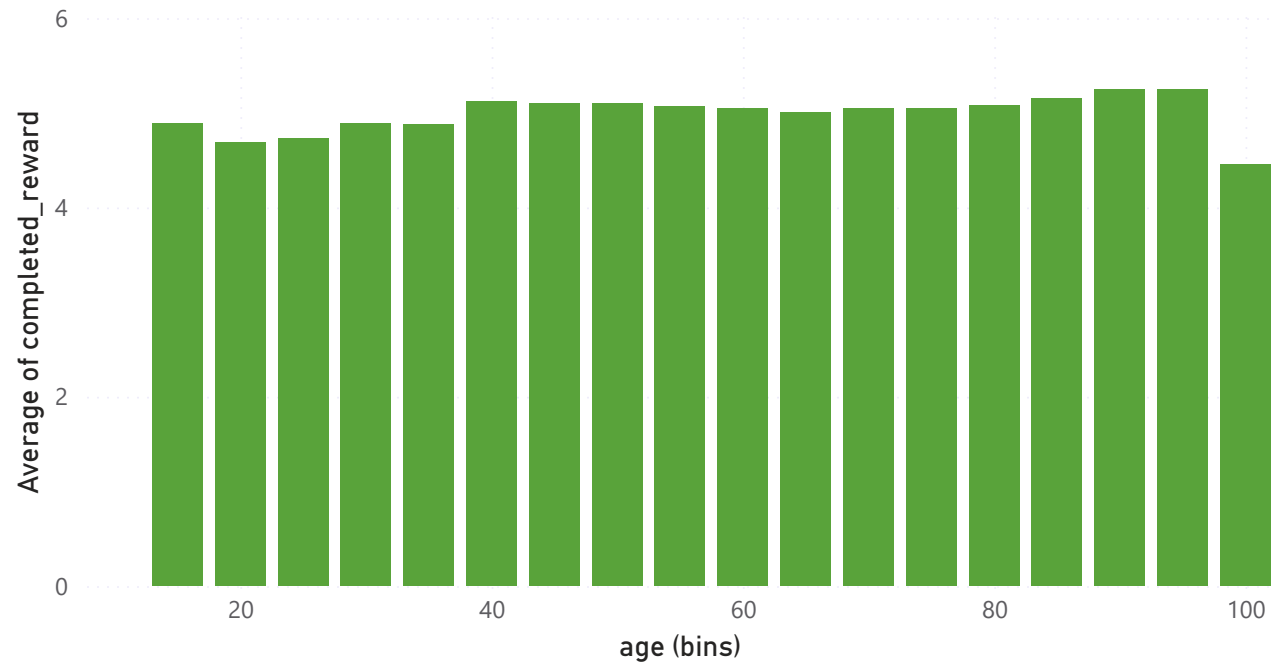

As can be seen, there is a clear relation between the number of offers sent to customers and the total revenue during that time.

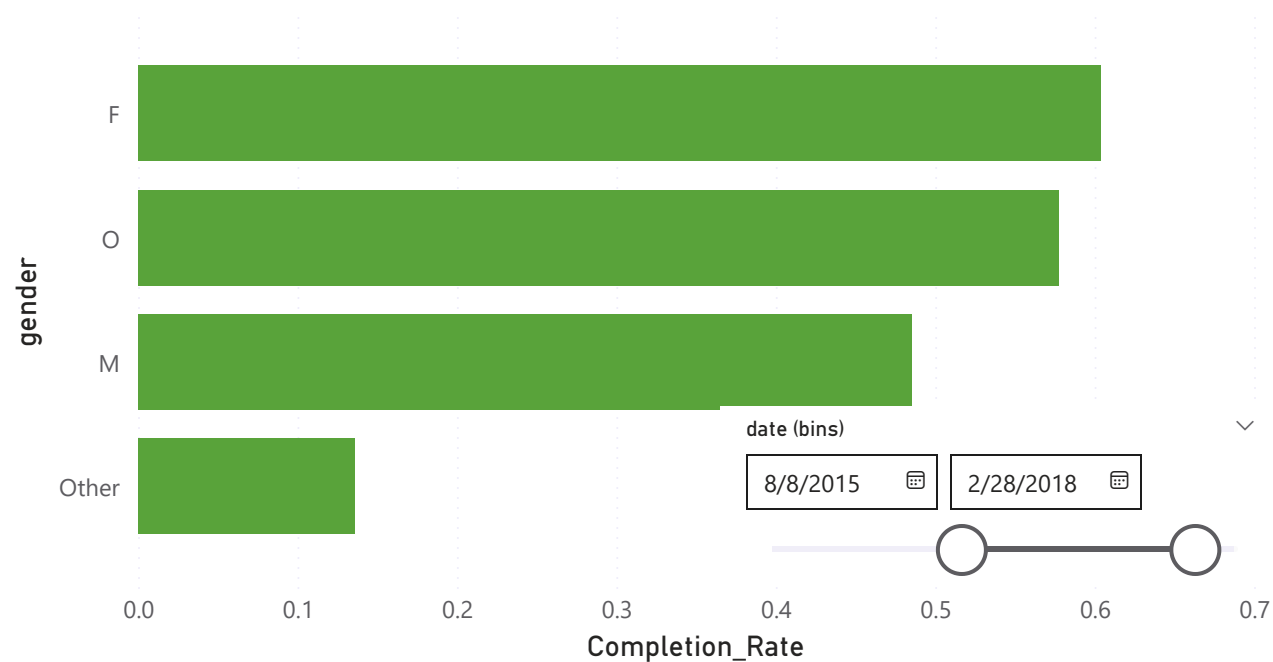

Each marketing campaign and increase in offers sent brings in new customers: 'Starbucks aggressively expanded and promoted its mobile rewards ecosystem and Mobile Order & Pay features during 2015. This likely drove a large wave of new app/rewards signups.'

As seen on 7/20/2017, as Starbucks launched an aggressive marketing campaign and nearly tripling the amount of daily offers sent, their revenue also nearly doubled compared to before. However, the average amount of time spent between purchase also steadily went up. From this we can infer that a wave of more casual customers joined, whom only make purchases once in a while.
